

# Rapid Model Building with Patterns

October 23, 2019

Bjorn Cole, PhD

Shane Connelly

# Outline

- Conceptualization of Ingrid Nerdman
  - Common MBSE Workflows
  - Motivation for Ingrid Nerdman
- Overview of Ingrid Nerdman
  - Ingrid Nerdman
- Employment of Ingrid Nerdman
  - Demonstration

## Common MBSE Workflows

- Customer approaches late in their development having decided they want MBSE support
- Customer and other engineers provide you with a large amount of lightly structured data relating to model components
- In both cases, the customer expects to rapidly gain insights and understandings about their complex system

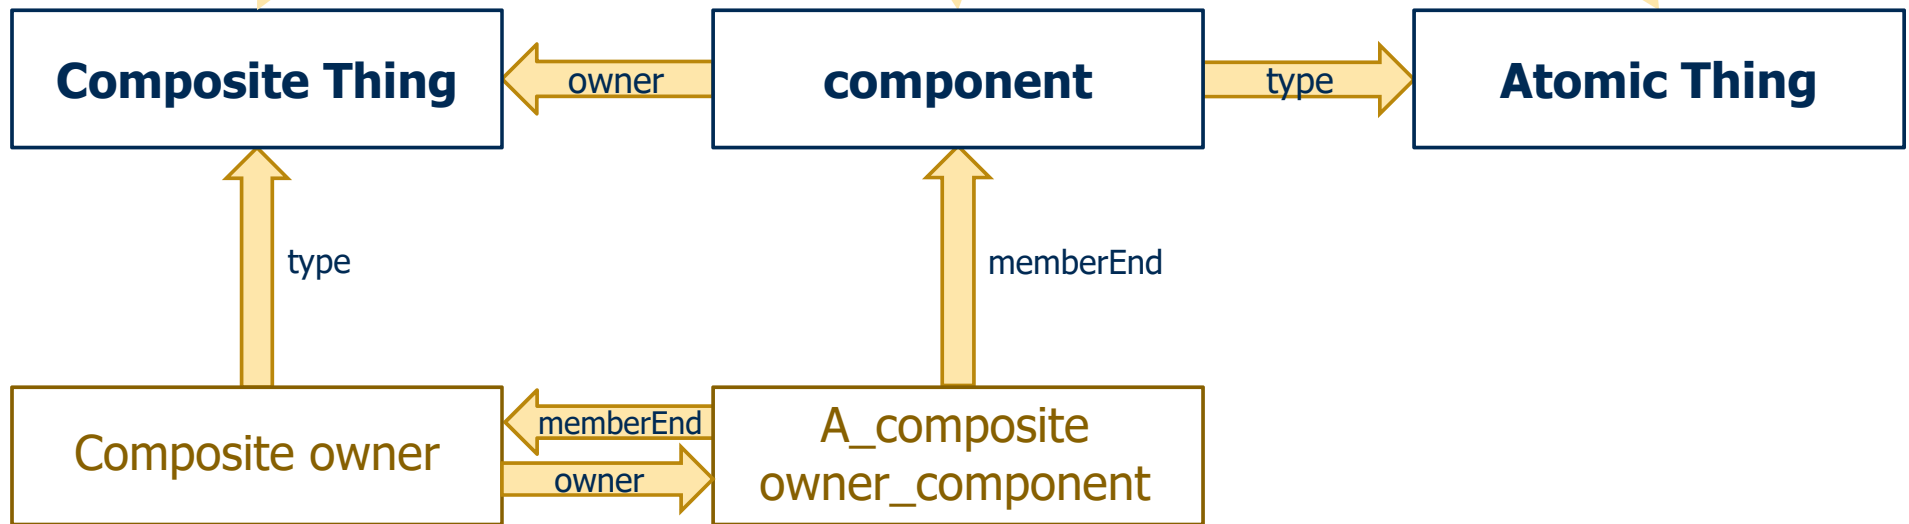

## Motivation for Ingrid Nerdman

- Reduce the impact of the Big Data problem
- Provide rapid, dynamic, and flexible model instantiation
- Curtail the “long tail” of infrequent contributors to MBSE work
- Increase speed
  - Modelers become more responsive
  - Save skilled laborers for skilled labor

## Ingrid Nerdman

- Spreadsheet based graph interpretation of a SysML modeling pattern to construct a new SysML model or update an existing one
- Reaches beyond the Cameo Excel/CSV Import
  - Supports full model creation
- Goes beyond Maple MBSE
  - Local change detection before touching the authoritative model
- Employs user predefined model patterns and meta data for all of its capabilities

## Questions

- We are in the process of open sourcing this tool
  - Email [ingrid-nerdman@gtri.gatech.edu](mailto:ingrid-nerdman@gtri.gatech.edu) with requests for access

## MBSE Workflow Tools

- The following analysis applies to any specialized CAD tool, but focus on SE tools today
- CAD tool for specialized operator that does complex SE tasks every day at high speed
- CAD tool leaves out “long tail” (tail is especially long in SE) of infrequent contributors, commenters, and editors

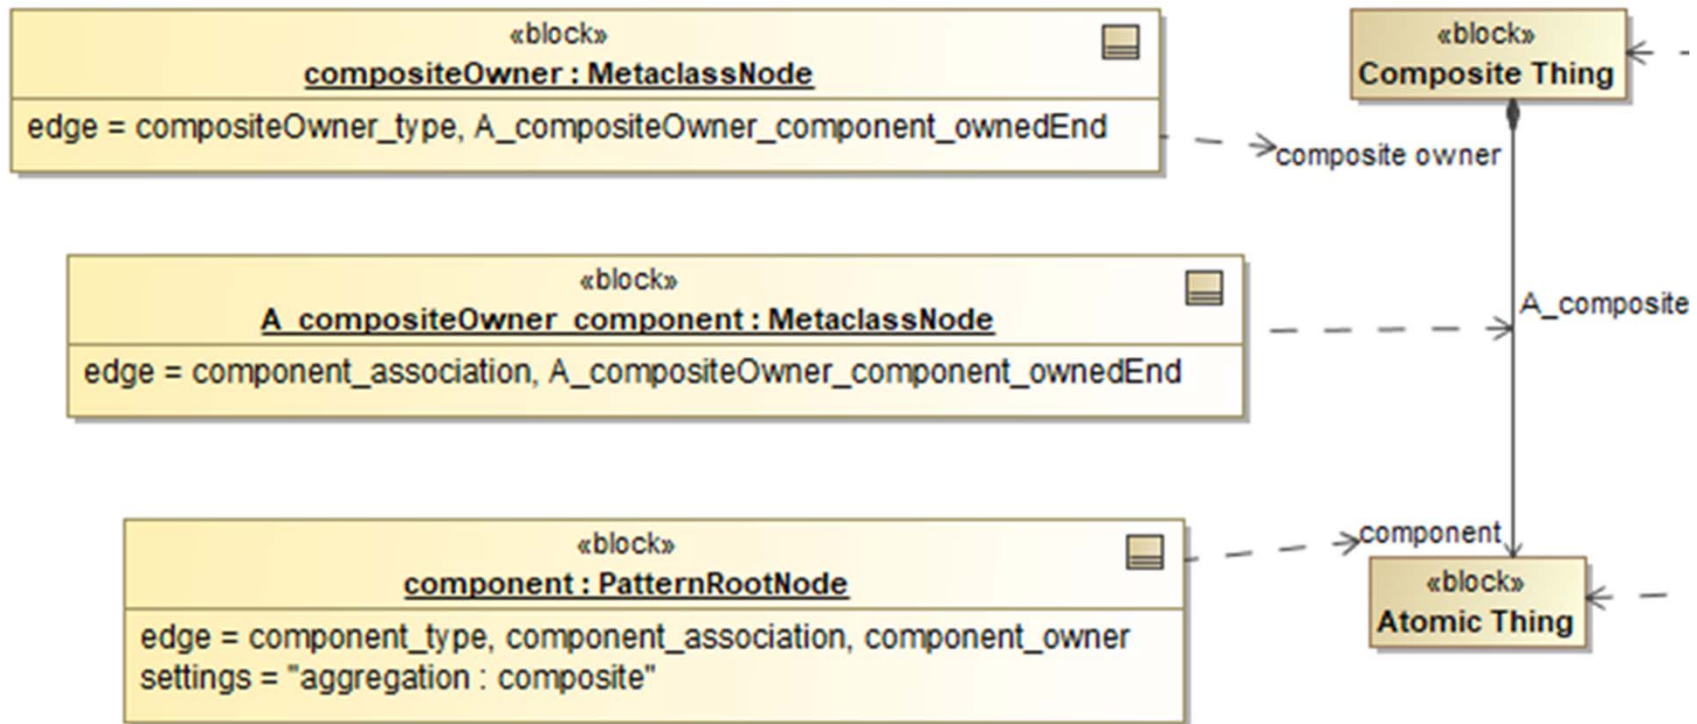

## MBSE Workflow Tools - Need More Speed

- Many customers currently come to us later than they should, but the tools also make us slow to respond
- Hard to start with a lot of architectural work already done (or “done”) and a need to build up a model quickly
- Just raw data ingestion tools would help

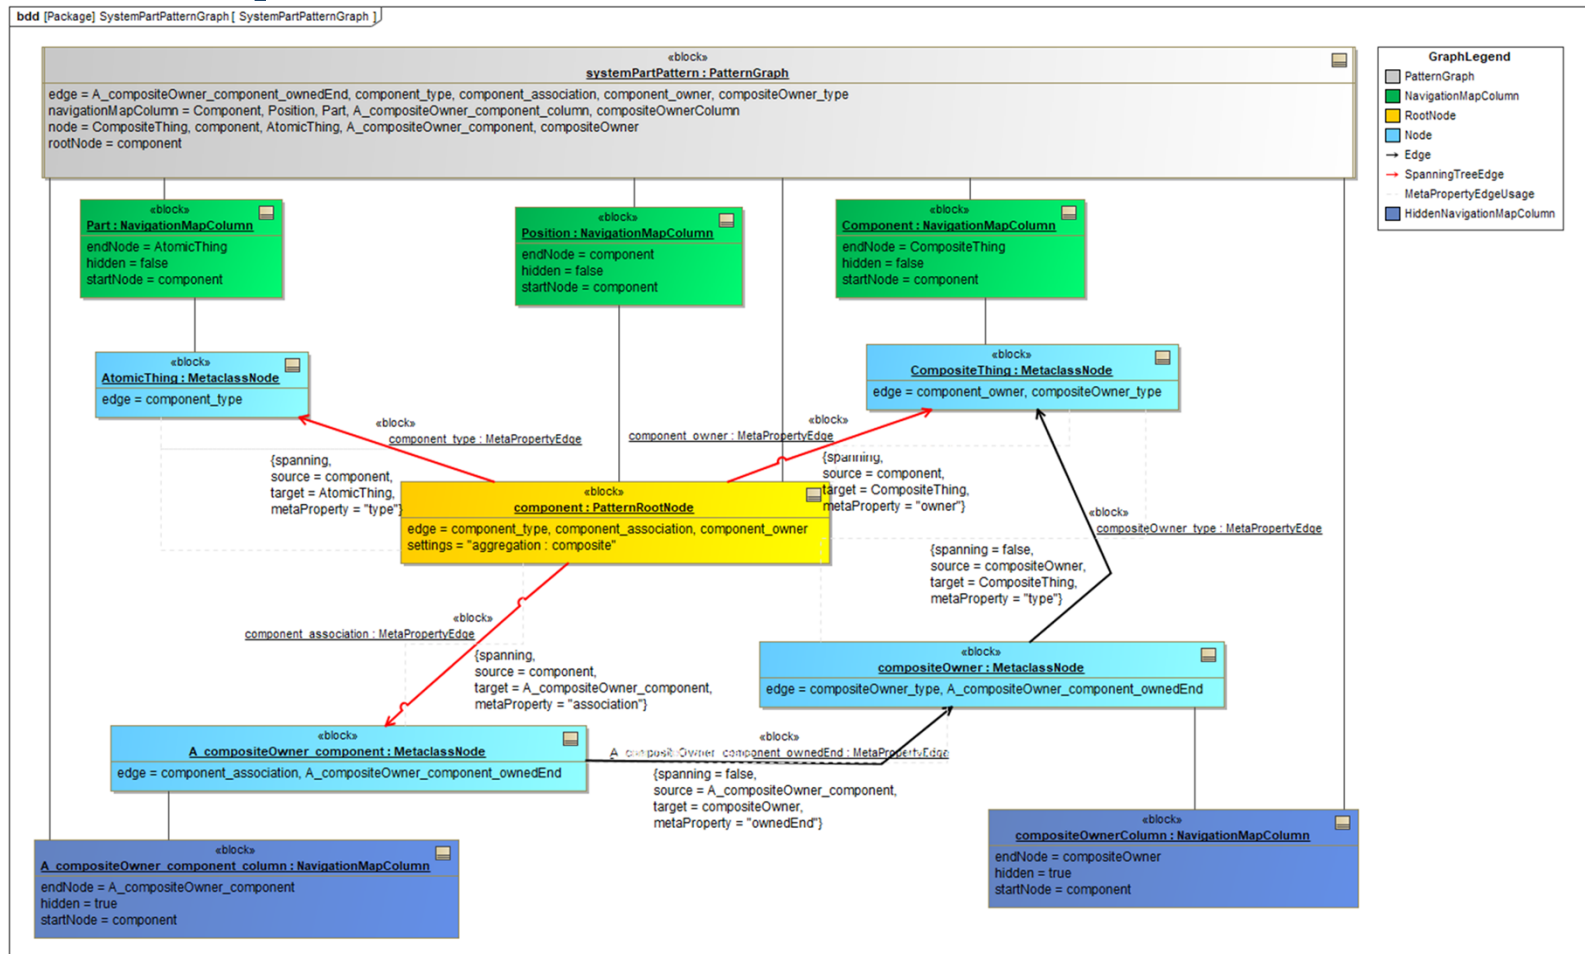

## Ingrid Nerdman Concept

- Goal is to support bulk data entry by non-modelers
- Goes beyond Cameo Excel / CSV Import because it supports full model creation
- Goes beyond Maple MBSE due to doing change detection before touching authoritative model
- Uses predefined model pattern metadata to support above

# Pattern Templates Defined in Cameo

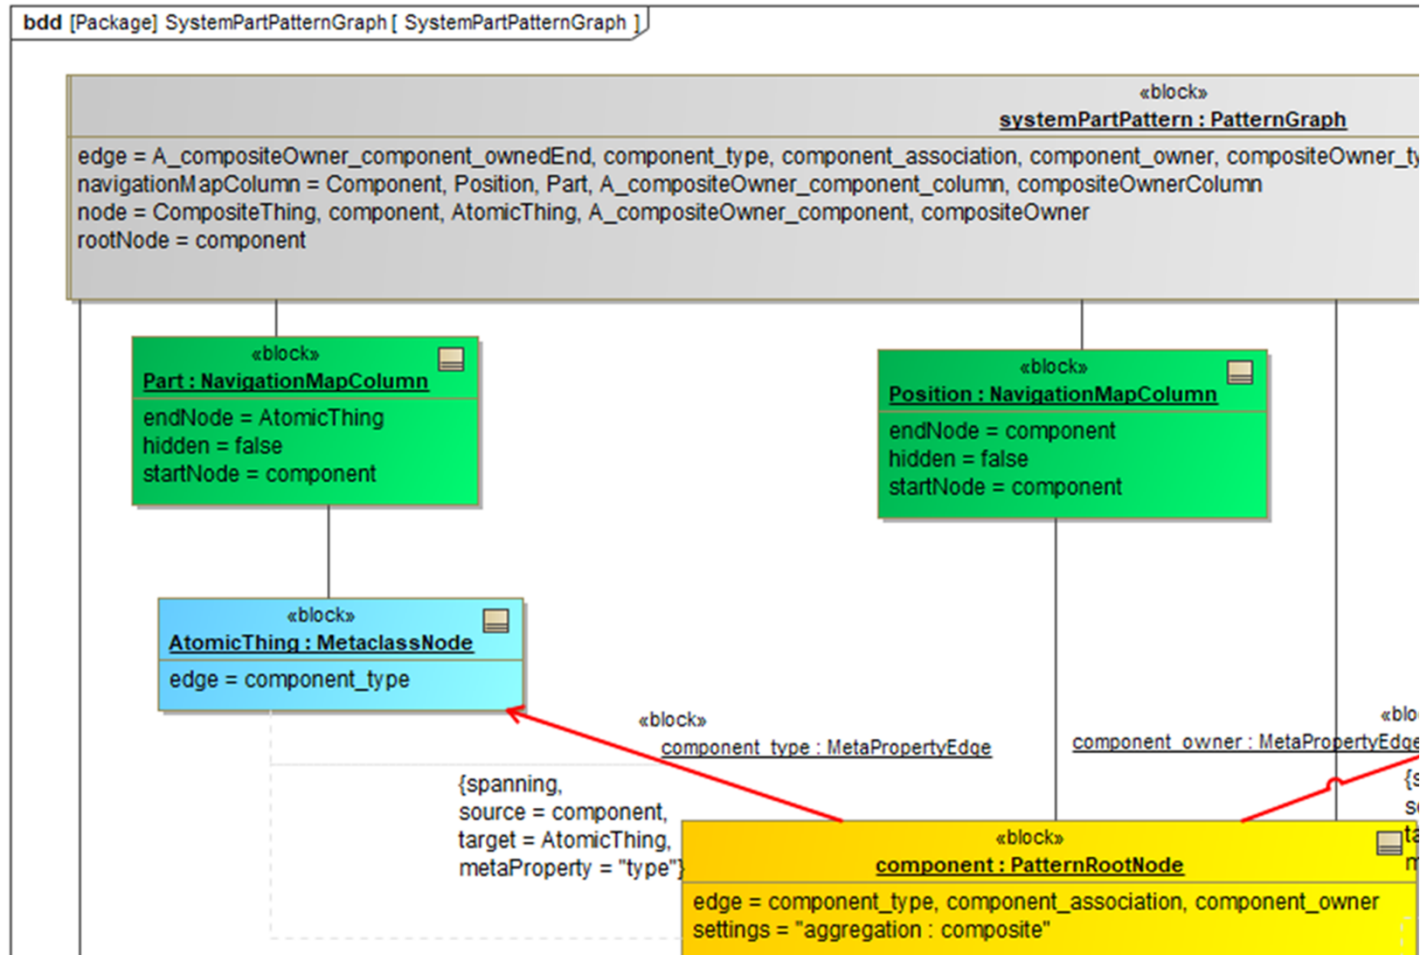

# Pattern Templates Defined in Cameo

# Pattern Templates Defined in Cameo

# Ingrid Nerdman Process

- Pattern Sheet
  - Column titles represent particular model concepts with significance defined in the Pattern JSON
  - Each cell interpreted as a graph node and by extension a SysML item
- IDs
  - Assigned by Ingrid Nerdman if missing
  - Associates the nodes to their known MagicDraw IDs to facilitate model ingestion
- Renames
  - User specifies desired name changes to elements of the model
  - Helps Ingrid Nerdman interpret user intent

## Ingrid Nerdman Process

- Excel File loaded in through command line
  - Pattern matched by sheet name
  - If provided, IDs and renames parsed
- Columns correspond to node type in subgraph
  - Columns added to complete the subgraph
  - Excess columns interpreted as annotations

<b>Component</b>	<b>Position</b>	<b>Part</b>
Car	engine	Engine

## Ingrid Nerdman Process

- Original compared to Change
  - Model type consistent
    - Edge attributes constant
  - Edges describe complete set of connections in model
- Change detection inspired by stable marriage algorithm applied to edges

Original Edge

Change Edges

$\{ (Car, engine, owner): [ ((Vehicle, engine, owner), 2), ((Engine, engine, owner), 1), (Drivetrain, drivetrain, owner), 0) \dots ] \}$

## Ingrid Nerdman Process

- High confidence changes and model creation written to JSON for SysML digestion
- Reusable JSON template for nodes and edges
  - Model creation or update changes the values passed to the template and operation communicated to Magic Draw
  - Patterns Template provides the SysML object specifications and Ingrid Nerdman passes the objects role relative to neighbors

# Ingrid Nerdman Process

- Spreadsheet view
  - First two columns show JSON changes
  - Unstable Columns let the user know of the changes that the computer was unsure of

Edit 1	Edit 2	Unstable Matches Original	Unstable Matches Change
('ME', 'Spacecraft', 'owner')	('ME', 'Space Ship', 'owner')	('spacecraft qua me context', 'Spacecraft', 'type')	('space ship qua me context', 'Space Ship', 'type')
