# 309 SWEG Supply Chain Risk Management Center of Excellence

#### A System Engineer's Approach to Software SCRM

Alexander Wright Parker Bauer

Defend | Protect | Secure

- Supply Chain Risk Management (SCRM) as related to software, firmware, and cyber physical systems is about eliminating vulnerabilities that adversaries may attack in DoD, Federal, and private sector critical infrastructure systems. As system engineers, we need to learn how to integrate SCRM into our processes and increase the likelihood that:
  - software and firmware is secure
  - > the supply chains producing it is secure
  - > the final customer is shielded from lower tiers of the supply chain where vetting is difficult

#### Who We Are

#### Parker Bauer

- > Computer Scientist/Mechanical Engineer
- Six Sigma Black Belt
- > Private industry supplier quality auditor
- Director of USAF Software Technology Support Center
- Hill AFB
- Co-lead of USAF 309 SWEG C-SCRM CoE

#### > Alexander Wright

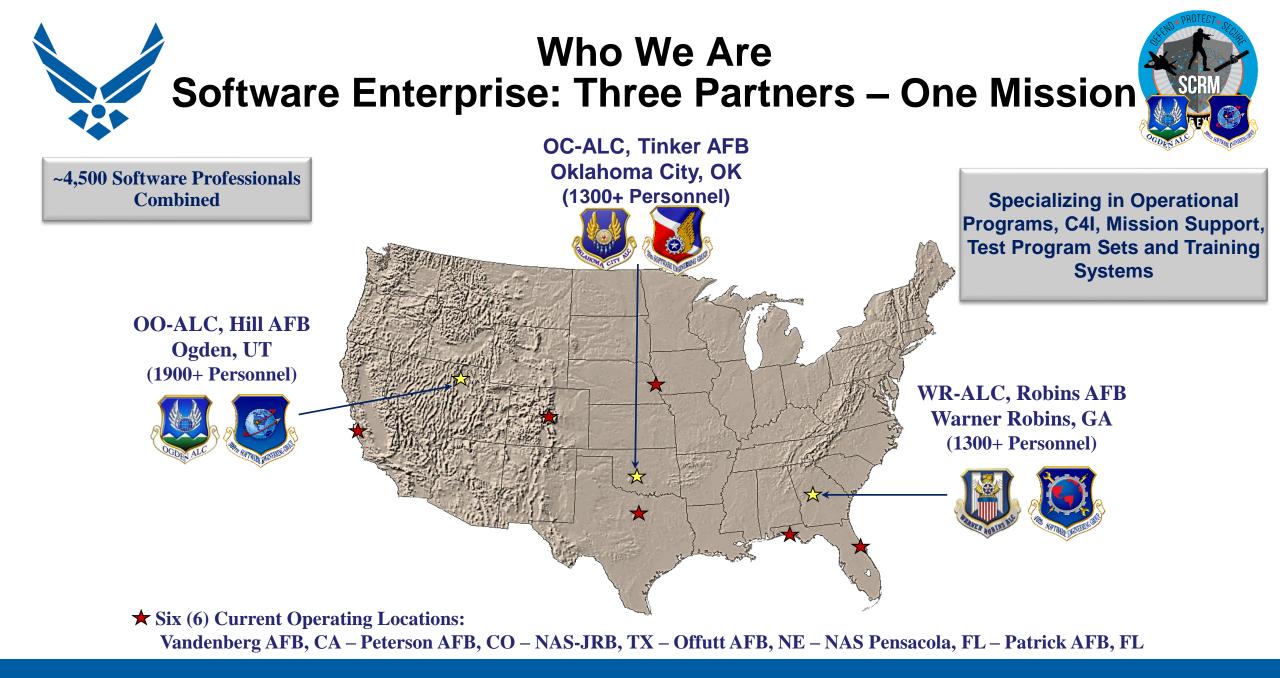

- Computer scientist and a member of the 309 Software Engineering Group.
- Worked on a number of air and space systems and became involved in SCRM in 2018
- Peterson AFB
- Co-lead of USAF 309 SWEG C-SCRM CoE

### **Product Breakdown**

Hardware

- > CPU
- > DRAMM Module
- Motherboard
- DiscreteGraphics
- idrac
- > SSD/HDD

Firmware

- UEFI (motherboard)
- > UEFI (iDRAC)
- SSD/HDD
- RAID Controller

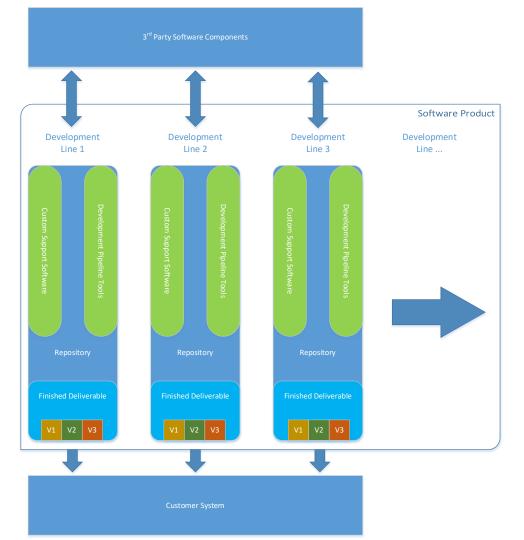

Software

- Installed OS
- idrac
  - > OS
  - > Webserver
  - > Database

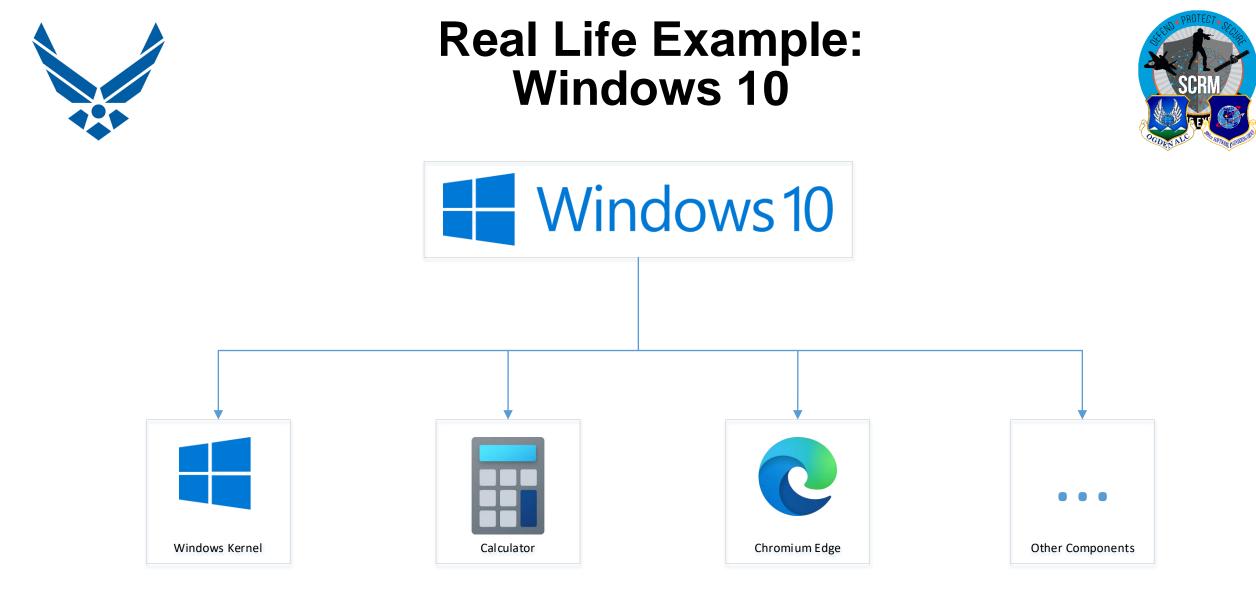

#### **Software Centric Product**

# **Software Versioning**

- Software and firmware can have many versions being maintained simultaneously
  - Different SKUs
  - > Different versions
  - Different Platforms
  - > Different Regions
- Processes can be different for each version
  - > Tooling
  - > Culture
  - Technology

#### Real Life Example: Windows 10

| VITIE Windows 10 versions |             |                       |                       |                                  |   |                                 |                                 |                    |  |

#### If C-SCRM Posture Degrades, Consider Isolating Components

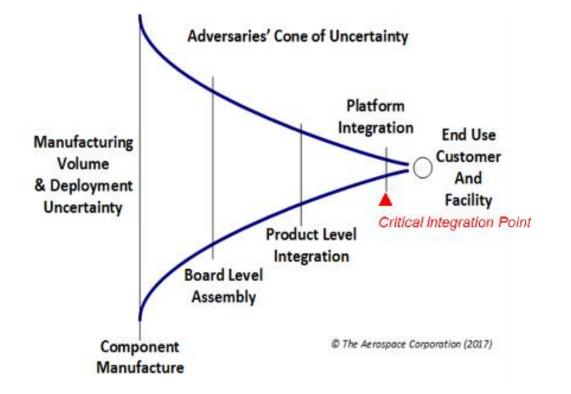

UNCLASSIFIED

Defend | Protect | Secure

# The Trust/Verify Boundary

- How far back into the suppply chain should we go?
  - At least 1st tier
  - Maybe 2nd and 3rd tier as needed
- There are risks to going back too far and identifying that component is part of a weapon system

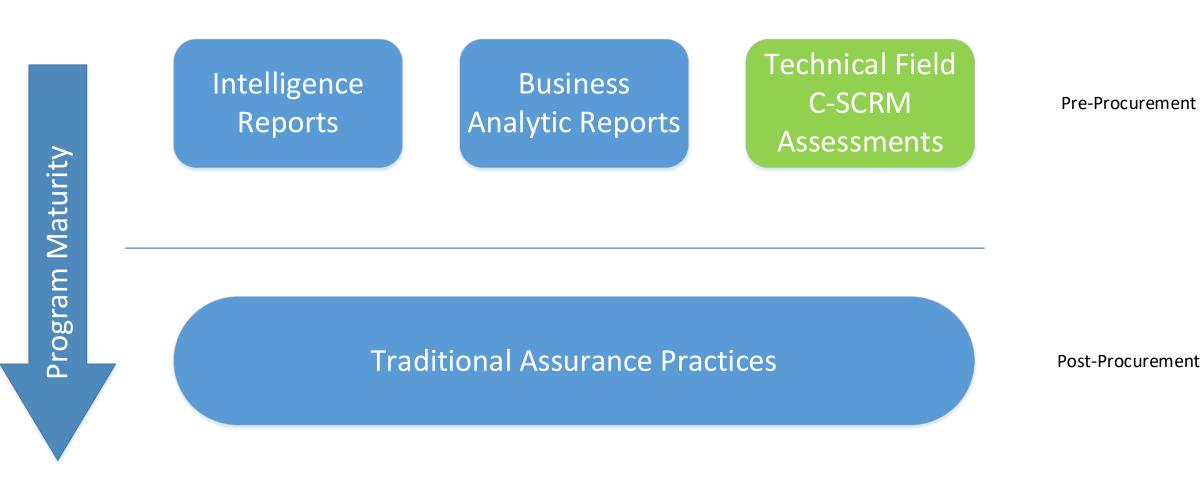

# The Three types of assessments **SCRM ASSESSMENTS**

### **Three Types of Assessments**

#### Adapting Space Force SMC SCRM Process THE TECHNICAL ASSESSMENT PROCESS

Defend | Protect | Secure

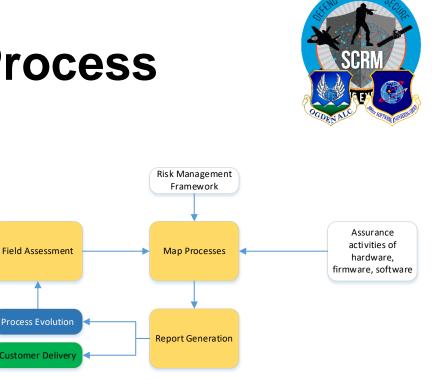

# **C-SCRM Assessment Process**

Scope Negotiation

Assessmen

Kickoff

- 1. Define scope with supplier and Government Organization and determine contract vehicle
- 2. Assessment kickoff with initial information exchange
- 3. Conduct field assessments, identify processes, and collect artifacts
- 4. Map and compare against best practices and document risks
- 5. Report generation with identified risks
- 6. Deliver report to customer and supplier

#### Questionnaire Assessment Categories

27

- > General Organizational Practices
- Hardware Centric Products
  - Design & Test
  - Integration
  - > Platform Firmware
  - > Platform Software
- Software Centric Products
- Cloud Centric Products

#### **Sample Questions**

#### **General Organizational Practices**

- How does continuous SCRM threat assessment factor into your organization's design, integration, test and support strategy? Can you cite an example where you have responded to or altered your business process based on the threat assessment?
- How has your SCRM strategy evolved over the past five years? What changes do you anticipate in the next five years?

#### Platform Management Software Development and Controls

- What processes are used internally to develop, build, test and release software? Do you maintain continuous integration, continuous deployment pipelines for this software? If so how are releases made available to customers?
- What types of platform management software do you provide to data center customers? Is it internally developed or contracted from a third party?

- A score is not assigned to each question, instead the assessment process looks for specific observations of policies and practices which are mapped to a SCRM threat level shown below
- These threat levels directly map to the risk levels in the RMF framework (DoDi 8510.01)

| Level 0                 | Level 1                  | Level 2                  | Level 3                    |
|-------------------------|--------------------------|--------------------------|----------------------------|
| Does Not Meet the       | Consistent with common   | Consistent with Standard | Best in Class Practice and |
| Standards of Common     | Practice but not Current | Practice for Current     | Targets Future Cyber       |
| Practice or Cyber Needs | Industry Standards       | Industry Standards       | Threats/Risks              |

## **How Risks are Identified**

#### Observations are rated by risk level and compiled by category.

| Category   | LO | L1 | L2 | L3 |
|--|----|----|----|----|
| General  |    |    |    |    |
| Organizational SCRM Practicies   |    | 2  | 4  | 3  |
| Hardware Centric Products  |    |    |    |    |
| Organizational Practices in Acquiring, Integrating and Controlling Materials         |    |    | 5  | 4  |
| Organizational Practices for Sourcing, Integrating and Controlling Platform Firmware |    | 4  | 3  | 1  |
| Design, Integration, and Test of Data Center Platforms                               |    | 3  |    | 2  |
| Development, Software Assurance, and Cyber Controls of Platform Control Software     |    | 4  | 4  |    |
| Software Centric Products  |    |    |    |    |
| Development, Software Assurance, and Cyber Controls of Application Software          |    |    | 2  | 3  |
| Cloud Centric Products   |    |    |    |    |
| Development, Software Assurance, and Cyber Controls of Cloud Infrastructure          |    | 2  | 1  | 2  |

Identified risk for PPP: If Supplier X signing servers are not separated from the development network, then there is the risk of insider threats being able to pass a malware payload as legitimate.

#### C-SCRM Assessments Across the Acquisition Lifecycle

31

- MDD-MS B: Best time to perform C-SCRM supplier assessments prior to selecting a Prime.
- <u>MS B FOC</u>: If C-SCRM assessments not performed prior to Prime contract award, assess suppliers during development of firmware and software to ensure secure C-SCRM posture.
- <u>Sustainment</u>: Never too late to assess a supplier even in Sustainment to understand C-SCRM posture. A program may take advantage of contracting for new capabilities to perform C-SCRM assessments.
- In all cases, continue working with suppliers to improve their C-SCRM posture/ensure no backsliding.

# In Conclusion

- DoD programs need input from three different kinds of SCRM assessments
  - Program Offices need more information and deeper technical expertise to illuminate their software and hardware supply chains
- Once supply chains are illuminated, understanding the depth that a program office should validate and which level to trust is key
- Programs need to establish a zero-trust model for critical components and be able to validate supply chain trust on a per component bases
